High over Huajiang Canyon in Guizhou province, a new construction project will integrate scenic spots, link surrounding villages and cultivate tourism.

The 80-kilometer Huajiang Canyon — a fissure in the earth equivalent to the Grand Canyon in the U.S. State of Arizona — is the longest of its kind in China. Ciffs are as high as 1,200 meters with a massive number of trees and vines clinging to the walls. Flowers fall on the green, fast-flowing currents below to form a colorful ribbon. It is also why the river is called the Huajiang River. Its true name is in Chinese...
